SteepHound Documentation

Release 0.1

Subhodeep Moitra <smoitra@cs.cmu.edu>

CONTENTS

Steep Hound is a tracker for Steep and Cheap , a website that displays one awesome deal at a time.

DOWNLOADING STEEPHOUND

You can get the latest version of steephound from https://github.com/smoitra87/steephound/archive/master.zip . Unzip the folder using

```
$ unzip steephound-master.zip
```

Alternatively, if you have git installed you can pull the source from github, like so

```
$ git clone http://github.com/smoitra87/steephound.git
```

INSTALLING STEEPHOUND (NOT REQUIRED)

This step is not really required. However if you would like to permanently place steephound in your system path, you can proceed with this step. .

```
$ sudo python setup.py install
```

RUNNING STEEPHOUND

If you have installed steephound in step install , running it is fairly easy. Execute the following command from anywhere

```
$ steephound.py
```

Otherwise, you will need to be in the same directory as the downloaded folder and then run

```
$ python steephound.py
```

You need to keep the terminal active in order for the script to run indefinitely. Alternatively you can use nohup and screen in order to keep the program running in the background forever.

MODULE

See below for description of `steephound` modules

Contents:
